

November 2, 2018 - Dylan Donaldson

1 Our Plan:

- Move items to one room to another at the beginning of class
- Continuing to assemble lunar lander
- Continuing to assemble the arm

On this day, we had to move items to another room which was Ms. Portifields room. Once the team got settled, a group was continuing to assemble the lunar lander. Dylan, Anna, Sarah, and Mimi were assembling the lunar lander. Another group was continuing to assemble the arm. Sherry and Zoe were the ones that were assembling the arm.

2 What We Got Done:

- We did not get anything done, because this day was hectic because we had to move to another room.

Nothing got done. Since the next day was an open house for the school, we decided to show off the robotics to the visitors and explain how robotics isn't just about the mechanical side of things, it also has a networking side.

3 What We Didn't Get Done:

- Did not finish assembling the lunar lander
- Did not finish assembling the arm

We did not finish assembling the lunar lander and the arm because we had to move to another room.

4 Next Practice:

- Finish lander
- Finish arm
- Build the course

The next practice is Thursday, November 8th, 2018. Our plan for next class is to finish the lunar lander and the arm. Then our next plan is to build the course for the robot.
