

My name is Gabe Ruoff. I'm a senior at The Key School and the leader of LC Robotics. This year I've worked as a project manager to streamline LC's development process and have helped my teammates learn how to draft parts and assemblies in CAD, program in Java, and have organized our design and build process. This season, I've gained leadership and project management experience by managing the team and its budget, as well as technical experience by building our robot's chassis and drive chain while writing the autonomous and teleop programs. I'll be attending university this year to pursue degrees in electrical engineering and music with the hope of specializing in autonomous systems later in my career.
